LS,

The IONITY role caught my eye on ClimateTechList. Building out EV charging infrastructure across Europe is exactly the kind of climate-tech problem I want to be closer to, and a mobile app as the primary customer touchpoint is a product challenge I find genuinely interesting.

My background sits at the intersection of product and technical execution. At South Pole I took multiple SaaS products from concept to launch in tight timeframes, writing requirements, coordinating architecture, running user testing cycles and shipping. I've worked closely with dev teams, defined acceptance criteria, managed backlogs and navigated cross-team dependencies - core PO work, even if the formal SAFe framing was sometimes lighter.

Before that I built CO_2ok from scratch: designed integrations across e-commerce platforms, made prioritisation calls under real constraints, led a team of 10+. Fighting for product coherence with limited resources is something I know well.

The e-mobility angle matters to me. Helping accelerate the shift away from combustion engines is the kind of work worth showing up for.

I look forward to expanding on this in an interview.

Regards,
Milo de Vries
